Information #flushyourmeds Scott Barry ;
By Scott A. Barry / Scott A Barry / Scott Barry ... ;
The Best Working Virtualbox WSL Machines no 3D Acceleration
and 64 MB Graphics as said ("Lubuntu 1804""Puppy""Slitaz") ... ;
With 4096 on the RAM, and Ublock Origin Privacy Badger ... ;
So the level of disorganization there is just one thing ... ;
Just do ("Four MB for Storage")-("Live TO RAM DISK") ... ;
Installed OSes are only temporary and Will Get Compromised ... ;
The Problem with Public WiFi and Library Cards is they phish
with TCPDump, Etherape, Wireshark, nmap, zenmap, and Ettercap,
and nobody is dumb enough to fall for that crap period ... ;
A second kind of good computer is those LG G6S Used with
No Sim and Degoogled with Neguard and an Alphanumeric PW
Lock and a 5150 Pin. You can put other ROMS on them or mod.
Those ship to PO Boxes through Ebay and are Nomads Land
Computers that only need Five Volts and run APKS from the
F-Droid Repository, some people had to give up Physical Books
and Material Possessions then they get books in their storage
room and resell them if they don't have a bar code for profit.
Thrift and surplus places have basic stuff and ewaste.
Most of the time it is dead HDD or Fixable Dead Mosfet/BIOS.
What people do with those phones is Security Cameras or just
filming Horizontally their Gang Stalking which I think is a
waste of time, again they are computers somewhat, they are just
an eye sore though, I do only F-Droid, Netguard then you must
not just Degoogle but set a Power Save Mode to stop pings then
maybe even change the ROM to Graphene OS, as this is only option.
Again I am no expert, I use Desktops as they have no IMEI number
and Howard uses phone, he just realizes how to lock them down.
Literally these computers would run for days and days on a saline
paper conductive rubber or DCell set of batteries and never
quit, because they are only five volts, not Nineteen or Twelve
like a regular Desktop or Laptop, I have Dell Inspiron 11 13000 that
only gets Eight Hours of Battery Life and runs on Car Power and
also runs Arch Linux as ("Arco") had to wait for BIOS support. ;
Also the Older Lenovos randomly the BIOS failed and quit ... ;
I kept those and they just died, I never want to go with HP ... ;
I use INTEL NUKS Mini PCS at least and The Lenovo M93P ... ;
Some of those I boot External Samsung T7 SSD and a USB Flash
Drive Samsung 128 GB, it works best on Linux not BSD ... ;
BSD fails to work on the Newer BIOSES only Linux Works ... ;
I only pick certain BIOSes now that Two Lenovos Have Failed ... ;
That Dell Inspiron 11 1300 has been working on Arch Fine ... ;
Arco Linux was the Only Arch Distro that worked well on it ... ;
If your computer is still a potato like what Howard told me
you could always get Virtual Box Machine or WSL or Docker or
Qemu, then run Slitaz, Puppy Linux, ("Lubuntu 1804") ... ;
Just disable 3D Acceleration and set 32 to 64 MB Graphics ... ;
Then install Brave Tor Ublock Origin and Privacy Badger. ;
Winhtttrackwinelinux Holywar*org/jewishtr/open*htm ... ;
web-archvie-org/files-catbox-moe/v7l38c.zip ... ;

with Decentraleyes Canvasblocker Return YT Dislikes ... ;
Then just go to the Public Library and run ("Online VMS") such
as ("windows93net") and ("Copy Dot SH") and that will work also
Internet Archive Basically Emulates most other old software ... ;
If you're a Penetration Tester ("Pentoo Kali Parrot Slitaz") ... ;
("Skywave, Flipper Zero, Puppy Linux, Tinycore, FreeDOS") ... ;
Literally if you only had 256 MB RAM Slitaz would work Fine ... ;
Computers remember had only 32MB or 8MB or 1MB and thats it ... ;
Most people did not run Windows 1 or 3.1 they ran JUST DOS ... ;
Search Engines.
DuckDuckGo. Seekr. h2ogpt.
startpage. qwant. windows93net.

Online Virtual Machines.
Punitive Psychiatry is one aspect of
being on this Cointelpro Watchlist.
Political Abuse of Psychiatry.
Then if you are on a Patriot
Act Watch List to be Gang Stalked
by Freemasons in Government what will
happen is they will control all the
INFO that goes through your Internet
Service Provider via ARP DNS Spoofing.
Browser Jacking your internet. BITM.
Now to incept the filters for Internet
for put on a COINTELPRO list you must
use Tails OS, Tor, Brave WBrowser, I2P,
Freenet, Arch Linux, Lubuntu 1804,
Virtual Box, Arco Manjaro Linux,
Puppy Linux, Slitaz Linux, Any of
those will do, ("copy dot sh") ... ;
A free VPN such as your own from a
server or Oracle Cloud or Linode or
even a free server, then ProtonVPN,
Then you spoof your Mac Address to R,
then set Google DNS 888844, then you go
about doing your business on a Proxified
Network aka it is harder for them now to
Spoof the DNS ARP Cache and Browser Jack,
Now you will get your info from your search
Engines aka Brave Appimage and Tor will give
you what you need and want from your internet
without Jew Zionist Mossad Infiltration.
A Virtual Machine will Protect your BIOS,
also you can then run Lubuntu 1804 inside.
Slitaz and Puppy L will run Incredibly.
Especially if your computer only has Eight.
So as of that Kubuntu Lubuntu 1804 will restore

any old machine and then you then install Ublock
Origin, Privacy Badger, Decentraleyes, Canvas Blocker.
Then TOR runs on 64 Bit and Brave on 64 Bit.
That is how get a Pakistani or Foreign IP Address.
Again I do not endorse any wrong doing, I am only saying
this, because peoples Internet is being filtered, because
they are placed on a Patriot Act Watchlist by Freemasons.
That is all I am saying, That is all I will ever say.
Computing only works well on Public Computers or on a
Solid State Drive or SSD using Linux and BSD. For BSD
There is Nomad and Ghost BSD, those two just work.
You spoof your Mac Address to Random set 888844 DNS,
you have your ports all closed on the nmap scan,
you get an ISP that is not Breached by the WiFi
Pinapple, you pay for Internet like everybody else,
and you do your business like everyone else, they
also have a hard time intercepting just Virtual Machines
where you put ("Lubuntu 1804") in Virtualbox ... ;
Virtual Machines Protect the BIOS, and If I didn't want
to use a Virtual Machine I would use a Proton or Free
VPN then Tor Browser Sixtyfour then Tails OS, then,
Brave Web Browser Sixtyfour Appimage, and all of those
would work for me on a Linux System, if I used it carefully
and did not load the Dark Web for instance and just a WS
such as Internet Archive and that is it, they just want to
control your info, that is how they roll, they are all about
spoofing DNS ARP other on your Internet Connection, that is
what these Freemasons DO, they get paid to do this to control
your finances, they control your finances by controlling your
internet and access to information, I have been saying this
over and over and people still push the communist mentality that
money is evil and what not, again a little money untaxxed is
harmless,
it hurts no one, they are just keeping targets of gang stalking poor
by controlling their Internet, thus Controlling their finances, you
get the idea, and you the person, must modify your connection with
tools such as Steganos Web Proxy, ProtonVPN, Tor, Tails OS, any of
those and Brave Web Browser to Intercept the Restricted Internet,
that only ranks certain things when you do a DuckDuckGo Search.
That is what I am trying to say, it is information control in order
to do financial control, thus controlling the targets finances ... ;
--Scott Alan Barry, The Atheist Holocaust Denier Dunce Dunce ... ;
